- 6. Measuring Pro-Poor Growth In South Africa
- 7. The Labour Market As A Key Constraint On Growth And Employment

1

8. Conclusion

1. Introduction

- South Africa = middle income country
- ✤ GDP in 2002 in US\$
 - ➢ PPP: 380 billion
 - Market e: 104 billion
- GDP per capita in 2002 in US\$
 - ➢ PPP: 9882
 - ➢ Market e: 2817
- ✤ GDP per capita PPP rank = 47
- ✤ HDI rank = 111 out of 175
 - \blacktriangleright GDP rank HDI = -64 (3rd greatest difference)
- Paper: Policies outcomes in the first 10 years of democracy

2. Macroeconomic Policy In Post-Apartheid South Africa

- 1994 first democratic elections
- 1994 Reconstruction and Development Programme (RDP)
 - Growth through development
 - Government to invest heavily in the poor to increase productivity of resources
- 1996 Growth Employment and Redistribution (GEAR)
 - Development through growth
 - Private sector investment to stimulate growth
- 2001- Post GEAR
 - Growth remains central but acknowledgement that public sector must play greater role
- Even though changing idealogies, similar macropolicies throughout the period

| | 2. Macroeconomic Policy In Post- Apartheid South Africa ctd |
|---|--|
| * | New government inherits an economy: On the verge of the debt trap, inefficient public |
| | spending, closed to the rest of the world |
| * | Initial focus: stabilise the fundamentals |
| | ➢ budget deficit & debt: GDP ↓ |
| | \blacktriangleright Protect the value of the ZAR: Inflation \downarrow |
| * | Fiscal side: |
| | Change composition of Govt spending |
| | Improvement in tax collection |
| | but maintain G:GDP |
| * | Monetary side: |
| | 1994-1998: Focus on internal and external value of Rand |
| | 1999 – Only focus on inflation |
| | Interest rates kept high for extended period |
| | |
| | |

Selected South African Macroeconomic Indicators, 1990-2003

3. Economic Performance

Growth and Investment, 1990-2003 (Real Percentage Change (2000 Prices))

3. **Economic Performance ctd: Welfare shifts**

Poverty line = R322 per person per month (2000 Rands)

Government Expenditure

Budget deficit ↓

- _G:GDP = 28% in 1996, 24.5 in 2000-2002, now ↑ing again
- ↓s in real terms from R256 billion in 1997 to R245 billion in 2000 (2000)
- Procyclical
- Contractionary up to post-GEAR
- But: Composition changes *
- Also: Fiscal incidence has improved: *
 - ITO social spending (Van der Berg)
 - 55% on Whites, 28% on Africans ▶ 1975:
 - 15% on Whites, 70% on Africans 1993:
 - 1995-2000: Concentration index ↓s further from -0.057 to -0.120

Fiscal Incidence

Education

- > 1/5 of national budget
- Van der Berg estimates education cost index:
- 1997: African=100, Whites = 171
- 2002: African=100, Whites = 128.8 (better qualified teachers)
- National norms and standards with poorer schools receiving proportionally higher funding (poorest 40% loaded)
- ✤ Health
 - Focus on Clinics (where the rural poor go)

Fiscal Incidence ctd

- Social Grants •
 - ± 10 million recipients, > R2.5 billion (effecting about 50% of households)
 - Many rural, women, elderly
 - Means tested
 - ➢ Woolard estimates:
 - Grants>2/3rds total income in poorest 20% of households, 13% in quint 2
 - Substantial poverty alleviation impact: almost halves poverty for the elderly
 - Additional positive effects school attendance, employment rates

Constraints on Growth and Employment

- Higher growth path is essential if we are to reduce poverty
- Why has growth been so low?
 - High interest rates
 - Volatile exchange rates
 - Skills constraints
 - Crime
 - Highly regulated labour market
